

# RAD STUDIO®

## GENERAL QUESTIONS

---

### ***What is CodeGear™ RAD Studio 2007?***

CodeGear™ RAD Studio 2007 is the only IDE with everything you need for modeling and developing native Windows and .NET 2.0 applications on and for Windows 2000, XP, and Vista. It combines Delphi® 2007 for Win32®, Delphi® for .NET, C++Builder® 2007, UML modeling and ECO technologies all in one integrated environment. CodeGear RAD Studio 2007 is a significant upgrade for Delphi, and C++ developers, with powerful new productivity and performance capabilities that enable software teams to eliminate tedious development tasks so they can quickly and cost-effectively deliver enterprise-class Windows applications.

### ***How do I choose between the editions?***

The Professional edition is a good choice for individuals or departments who want a proven visual Rapid Application Development (RAD) environment for Windows development with support for Windows Vista™ and AJAX for building interactive web pages. Professional also includes drivers for connecting locally to InterBase and MySQL 4.1/5.X.

The Enterprise Edition includes all the features of Professional plus support for Enterprise SQL Databases (Oracle 10g, MS SQL Server 2000/2005, Informix 9x, IBM DB2 8.x, Sybase 12.5) and interactive web applications with AJAX support. Enterprise also includes enhanced features for the Together® Visual Modeling Platform including new diagrams (Sequence, Collaboration, Deployment, Use Case, Activity, and Component diagrams), design Patterns support, XMI 1.1 Import/Export, documentation generation, and audits and metrics.

The Architect edition includes all the features of Enterprise and adds more advanced UML Modeling including language neutral modeling projects. The Architect edition also includes Enterprise Core Objects (ECO) IV. ECO IV provides a transparent way for objects to persist in a database, with Object persistence, Object Relational mapping and object transaction all wrapped in a Model Driven Development (MDD) framework.

### ***What if I don't need all the personalities?***

Customers who don't need all the languages can choose to install only those they need for a more lightweight installation. In addition, even if customers install all of the supported languages, at runtime they can choose to either load all of the languages or only load a single language (through dedicated desktop icons or command line options).

### ***What has changed for C# developers?***

CodeGear RAD Studio 2007 provides a basic level of support for C# development. You can create new projects, edit them and compile them. More advanced features like visual design, modeling, and ECO that were available in past versions are no longer available in RAD Studio 2007.

### ***What are the key benefits of CodeGear RAD Studio 2007?***

CodeGear RAD Studio supports both native Windows development (for C/C++ and Delphi) and .NET development (for Delphi), within a single consistent RAD environment, simplifying maintenance and new development of Win32 and .NET applications. With rapid application development support for both native Windows and .NET applications on and for Windows 2000, XP, and Vista you can choose the language and OS that best meets your needs. Develop Web, n-tier and database-driven applications on Windows 2000, XP, or Vista and deploy them on the Windows platform of your choice.

FAQ

In addition, the latest editions of award winning Delphi and C++Builder products include many new features and enhancements to accelerate development and make you more productive. We've identified many of the new features below.

## ***What is Blackfish™ SQL?***

Blackfish SQL is a fully managed SQL-compliant, highly portable, embedded database that can be deployed with your application.

CodeGear RAD Studio 2007 Architect and Enterprise includes unlimited Blackfish SQL database deployment on systems with 1 CPU, up to 5 users / 20 connections, and support for databases up to 2GB.

CodeGear RAD Studio 2007 Professional includes unlimited Blackfish SQL desktop database deployment on systems with 1 CPU, for 1 user / 4 connections, and support for databases up to 512 MB.

Additional deployment licenses can be purchased separately for situations where you need support for server deployment, multiple CPUs, additional users / connections and increased database sizes.

## ***What if I need capabilities of Blackfish SQL that go beyond what ships with CodeGear RAD Studio 2007?***

We offer additional licensing for Blackfish SQL beyond what ships with CodeGear RAD Studio 2007. Contact your local CodeGear sales office for more information.

## ***How do I purchase CodeGear RAD Studio 2007 and how much does it cost?***

CodeGear RAD Studio is available directly from CodeGear and from our reseller partners. You can find locate your online store and resellers by country at <http://www.codegear.com/shop>.

Volume buyers, VARs and those interested in OEM licensing should contact a CodeGear sales representative. To find the CodeGear office nearest you, visit: <http://www.codegear.com/about/contact>.

<b><i>Edition</i></b>	<b><i>New User</i></b>	<b><i>Upgrade</i></b>	<b><i>Support &amp; Maintenance</i></b>
<b>CodeGear RAD Studio 2007 Architect Edition</b>	<b>\$3,299.00</b>	<b>\$2,499.00</b>	<b>\$990.00</b>
<b>CodeGear RAD Studio 2007 Enterprise Edition</b>	<b>\$2,499.00</b>	<b>\$1,699.00</b>	<b>\$750.00</b>
<b>CodeGear RAD Studio 2007 Professional Edition</b>	<b>\$1,199.00</b>	<b>\$549.00</b>	<b>\$360.00</b>

Academic pricing is also available at \$99 for the Professional edition and \$399 for the Architect edition.

FAQ

# RAD STUDIO®

## ***What are the limitations of the Academic edition?***

The Academic edition can be used only for learning in an academic or classroom environment. Educational institutions cannot use the academic version to produce software for use within their institution.

Will there be localized versions of RAD Studio 2007 and when will they be available?

## ***What languages is CodeGear RAD Studio available in?***

CodeGear RAD Studio 2007 is available in English, German, French and Japanese. All four localized versions are available immediately. When installing the product, you are given a choice of which language you would like to install.

## ***Which products qualify for the upgrade pricing?***

**Professional Upgrade** – owners of any previous version of Borland Developer Studio, Delphi, or C++Builder Professional products.

**Enterprise Upgrade** – owners of any previous version of Borland Developer Studio, Delphi, or C++Builder Professional or Enterprise products.

**Architect Upgrade** – owners of any previous version of Borland Developer Studio, Delphi, or C++Builder Enterprise or Architect products.

## ***Where can I find more information on the product?***

More information about RAD Studio 2007 is available on the CodeGear Web site at:  
<http://www.codegear.com/products/radstudio>.

A variety of articles about CodeGear RAD Studio 2007 can be found on the CodeGear Developer Network at:  
<http://dn.codegear.com>.

## ***How can I try RAD Studio 2007?***

The RAD Studio 2007 Architect Trial will be available for download shortly after the release of the product at:  
<http://www.borland.com/downloads/free/radstudio>.

## **TECHNICAL QUESTIONS**

---

### ***Can I develop applications in Windows 2000 or XP that run on Windows Vista™ and vice versa?***

You can develop applications on the Windows OS that is most productive for you, so you can develop applications on any of the three operating systems (Windows 2000, XP, or Vista) and then deploy them on any or all of them. In addition, with some exceptions, applications produced with CodeGear RAD Studio 2007 should run on Windows 98, though Windows 98 is not officially supported as a deployment platform. Please conduct proper testing of your application on Windows 98 before deploying to that platform.

# RAD STUDIO®

## ***What are the pre-requisites for installing RAD Studio 2007?***

RAD Studio 2007 requires that the following be installed on your system:

- Microsoft .NET Framework 2.0
- Microsoft .NET Framework SDK 2.0
- Microsoft Visual J# 2.0 Redistributable Package
- Internet Explorer® 6.0 or higher
- MSXML 6

If you don't already have them installed, they will be installed automatically by the installer before the main product is installed.

## ***Will CodeGear RAD Studio 2007 run on a machine that has the .Net 3.0 Framework installed?***

Yes, CodeGear RAD Studio 2007 will run on a machine that has only the .Net 3.0 framework installed.

Can I install CodeGear RAD Studio 2007 on a machine that already has Delphi 2007 for Win32 and/or C++Builder 2007?

Yes, you can. The installer will install CodeGear RAD Studio 2007 on machines with either Delphi 2007 for Win32, C++Builder 2007, or both. The installer will automatically uninstall these products, and install the new versions with the new features.

## ***Do I have to register my copy of CodeGear RAD Studio 2007?***

Yes. When you first run the product, a small application will open and ask you to register the product. Once that is done, and your product key is validated, then your product will be ready to run. You can delay registration for up to 30 days if you don't have an internet connection available when you install.

## ***Can I open my projects created with older versions of C++Builder, Delphi Win32 and Delphi .NET in CodeGear™ RAD Studio 2007?***

Yes, you should be able to do so, depending on the installed components required by your projects. The products in RAD Studio 2007 use the MSBuild system for the build engine, and thus this new release requires a new project file. However, the IDE will seamlessly update your projects to the new format.

After the install is over, I have a large set of files in my c:\Documents and Settings directory. What are those?

Those files are a cache of your specific installation left by the installer. The installer requires these files in order to do proper updates and uninstalls. You can delete these files if you wish, but understand that in doing so, you will no longer be able to apply updates to the product. If you do delete these files, you can run a repair on the product, and the installer will restore them for you.

You can, if you wish, back these files up to a separate storage source, and then the installer will ask you for these files when doing an update.

FAQ

***Will CodeGear RAD Studio 2007 coexist with previous versions of Delphi, C++Builder, and Borland Developer Studio?***

Yes, CodeGear RAD Studio 2007 will run fine and not interfere with previous installations of Delphi, C++Builder, C# Builder, or Borland Developer Studio.
